

Abhi me tume samja rha hu ki mera jo ye old system tha vo ye kese kam akrta tha kese ye pricription banata tha, to first image dekho usme sb patient ka queu hai jo reception banati hai uske dashboard se, phir ye yha show hota hai , last image jo hai vo first step hai pricrition ka vha pe dekho category hai, to ye category me sb complians assoiciate krte hai jo ye dono ka data hai vo khud doctor hi banata hai system me , left side me last image me dikh rha hoga ki pricription setting to ye pehle sb bharna padta hai us hisab se yha pe sare tabels bante hai, to ab kya hoga ki patient aya to vo khli complain select hi karna hai aur kuch nai, ab age badhte hai and isme mene is tarike se rakha hai ki ye jo system hai unko hm aj add krte hai jese ki gujarati me "Kahnjval" to uske baju me english me bhi add krte hai "Itching" to isse kya hoga ki jb print ayega to vo gujarati name and bracket me english me bhi ayega samj aya?

ab second image ye hai lables to vha pe bhi hm direct sirf likhna hota hai pr pricription setiing me jb ye add krte hai to aek aur chiz add krte hai jese ki samj Weight hai to uske samne majurment ata hai KG. Todono box ko fill karte hai weight to uske pi6e ayega kg kisi kisi lablem me ye piche ata hai kisi kisi me nai ata hai, abhi ate hai tabel detailes pe to ye bhi atble full banta hai apna pricription setting me hi phir vha hm privew bhi dekh sakte hai and phir ye table yha ata hai to hm isme details add kr sakte hai, ten ata hai medicine details and tm ab aek bt dekho ki jo medicine hai vo bhi hm add krte hai pr formate ye pura use karte hai jese ki

Medicine Name	Doz	Morning	Afternoon	Evening	Tab	Description
---------------	-----	---------	-----------	---------	-----	-------------

and ye fulldetailes auto matically fill ho jati hai jese hi me medicine ka name dalega, aur me medicine name jese paracitamole hai to agar me "par" likhega na to vo suggetion me aa jata hai niche to vo select kr denge to auto fill ho jayega sb kuch and ye agar doctor gujarat hoga to vo sare filed gujarati me set karega to gujarati me ayega pricription, then ata hai suggestion detailes, abhi samjna ki jb hm ye complain add krte hai uske samne hm suggestion bhi rakhte hai to samne wala suggestion yha pe sirf click krte hai, samj aya? , then ata hai note and next visit date ye heart hai do let me know what you have understand so far do not start development

What you have understand in past

“Bilkul! Pehle images dekhta hoon toh exactly samajh aayega ki old system kaise kaam karta hai. Development start nahi karunga — sirf samajhna hai.

Ab sab 6 images analyze ho gayi hain. Aapki explanation + screenshots se mujhe **100% clear** ho gaya hai. Let me confirm my understanding:

Mera Understanding — Old Prescription System Ka Complete Working

Prescription Creation = 5-6 Step Wizard (Stepper)

```
```mermaid
graph LR
 S1["Step 1
🏠 Category/CO
(Complaints)"] --> S2["Step 2
📋 Labels
(Vitals)"]
 S2 --> S3["Step 3
📊 Table Details
(Custom Tables)"]
 S3 --> S4["Step 4
💊 Medicine Details
(Autocomplete)"]
 S4 --> S5["Step 5
💡 Suggestion Details
(Pre-linked Advice)"]
 S5 --> S6["Step 6
✅ Finish
(Print)"]
 ...
```

---

### ### STEP 1: Category / CO (Complaints) Selection

**\*\*Setup Phase (Prescription Settings):\*\***

...

Doctor creates in Prescription Settings:

- Category: "Infertility"
  - Complaint: "ખંજાવ (Itching)" ← Gujarati + English
  - Complaint: "મૂળાવયવ (Mulavayav)"
  - Complaint: "પુરુષરત (Purushrat)"
- Category: "Fertility"
  - Complaint: "અવયવ (Avyav)"

| — Complaint: "ઝાડ્યુ (Anyu)"  
...

**\*\*Prescription Phase:\*\***

- Doctor sirf **\*\*CLICK\*\*** karta hai pre-defined complaints ko
- Kuch nahi type karna — sab checkboxes hain
- Print pe dikhega: **\*\*"ઝાડ્યુ (Itching)"\*\*** — Gujarati + bracket mein English

**\*\*Key Point\*\***: `co\_master` table mein store hota hai + `questions\_master` + `suggestions\_master` — sab interconnected

---

### ### STEP 2: Labels (Vitals)

**\*\*Setup Phase (Prescription Settings):\*\***

...

Doctor creates labels with OPTIONAL units:

| — Label: "BP" → Unit: (none or mmHg)  
| — Label: "Weight" → Unit: "Kg" ← Show after value  
| — Label: "Pulse" → Unit: "bpm"  
| — Label: "Temperature" → Unit: "°F"  
| — Label: "P/A" → Unit: (none) ← Clinical note, no unit  
| — Label: "RS" → Unit: (none)  
...

**\*\*Prescription Phase:\*\***

- Dynamic form generate hota hai labels se
- Doctor sirf **\*\*values fill\*\*** karta hai
- Unit automatically label ke saath/saath ya peeche dikhta hai (doctor ne setup mein define kiya)

...

Example output on print:

BP: 120/80 mmHg

Weight: 70 Kg

Pulse: 72 bpm

P/A: Patient looks normal

...

---

### ### STEP 3: Custom Table Details

**\*\*Setup Phase (Prescription Settings):\*\***

...

Doctor creates table template:

- Table Name: "Ultrasound Details"
- Columns: #, Rt, Lt, RtF1, LtF1
- Row Labels: AFC, Weeks, AFI, EFW, Placenta, MCAPI, UMBPI, UtPi, Utras
- Footer: av/rv | CX:Length | ET: \_\_\_\_mm Triple Line | CX:mucus
- Preview available 

...

**\*\*Prescription Phase:\*\***

- Pre-built table aata hai with empty cells
- Doctor cells mein values fill karta hai
- Yeh medical data ke liye hai jahan structured table chahiye (ultrasound, eye prescription Rt/Lt, etc.)

---

#### ### STEP 4: Medicine Details

**\*\*Setup Phase (Medicine List):\*\***

...

Doctor adds medicines with ALL details:

- Medicine: "Paracetamol"
  - Dose: "500mg"
  - Morning: "1"
  - Afternoon: "1"
  - Evening: "1"
  - Tab: "10"
  - Description: "After food" (or Gujarati: "ખાન પછી લેવું")

...

**\*\*Prescription Phase:\*\***

- Doctor type karta hai "par" → Autocomplete mein "Paracetamol" dikhta hai
- **\*\*Select karte hi SAB fields AUTO-FILL\*\*** ho jaate hain
- Doctor edit bhi kar sakta hai if needed
- "+ Add More" button se naya row add

...

Output on print:

Medicine: Paracetamol | 500mg | Morning: 1 | Afternoon: 1 | Evening: 1 | Tab: 10 | After food

...

**\*\*Bilingual\*\***: Agar doctor Gujarati mein medicine name set karega toh print Gujarati mein aayega

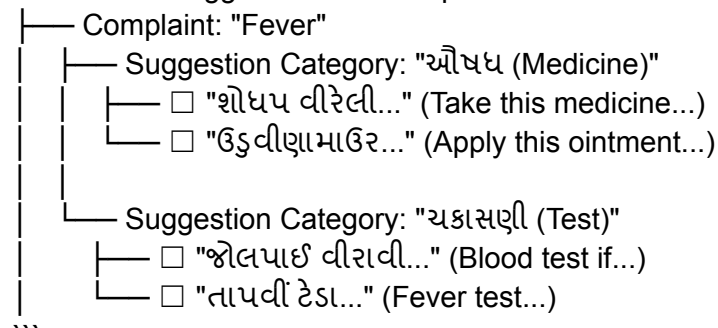

---

### ### STEP 5: Suggestion Details

**\*\*Setup Phase (Prescription Settings):\*\***

...

Doctor links suggestions TO complaints:

**\*\*Prescription Phase:\*\***

- Jo complaints Step 1 mein SELECT kiye the, unke linked suggestions **\*\*AUTOMATICALLY\*\*** yahan dikhte hain
- Doctor sirf **\*\*CLICK\*\*** karta hai checkboxes — kuch type nahi karna
- Two categories: Medicine-related suggestions + Test/Check suggestions

**\*\*Plus:\*\***

- **\*\*Note field\*\***: Doctor free-text likh sakta hai
- **\*\*Next Visit Date\*\***: Date picker se select
- **\*\*Microphone icon\*\***: Voice input available

---

### ### STEP 6: Finish

- Spinner dikhaata hai processing
- "Go Appointment" → Wapas appointment list
- "Print Prescription" → Print view open hota hai

---

### ### Complete Data Flow Diagram

Key Understandings Confirmed ✓

| # | Understanding | Confirmed |

| ---|-----|-----|

| 1 | Prescription is a ****6-step stepper wizard**** | ✓ Images show 5-6 step stepper |

| 2 | CO/Complaints are ****pre-defined by doctor****, patient sirf select karta hai | ✓ Checkboxes visible in Image 1 |

| 3 | ****Bilingual support****: Gujarati + English in brackets on print | ✓ Gujarati text visible in all images |

| 4 | Labels have ****optional units**** (Weight → Kg, BP → no unit) | ✓ Image 2 shows "Weight (Kg)" |

| 5 | Custom tables are ****built in settings**** with preview | ✓ Image 3 shows structured table |

| 6 | Medicines have ****autocomplete**** and ****auto-fill all fields**** | ✓ Image 4 shows

"Peracetamol" with all fields filled |

| 7 | Suggestions are ****pre-linked to complaints**** — auto-appear when complaint selected | ✓ Image 5 shows checkboxes with Gujarati text |

| 8 | Suggestions have ****categories**** (Medicine vs Tests) | ✓ "ઔષધ" and "ચકાસણી" headers |

| 9 | ****Voice input**** (microphone icon) for prescription | ✓ Visible in images |

| 10 | Print has ****custom header/logo**** from P Other Settings | ✓ Sidebar shows "Prescription Settings" |

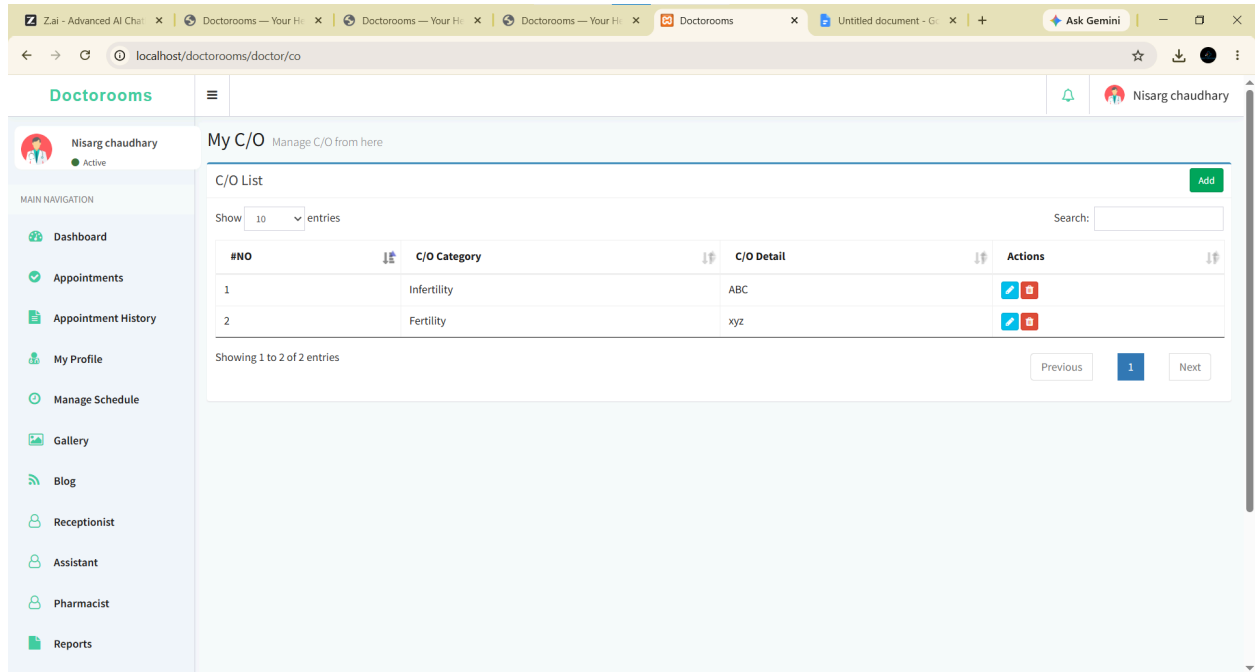

****Yeh mera understanding hai — sahi hai ya kuch miss hua?**** Development start nahi kar raha, sirf confirm kar raha hoon ki plan mein yeh sab accurately reflect ho. 🎯

“

How Sytem Works

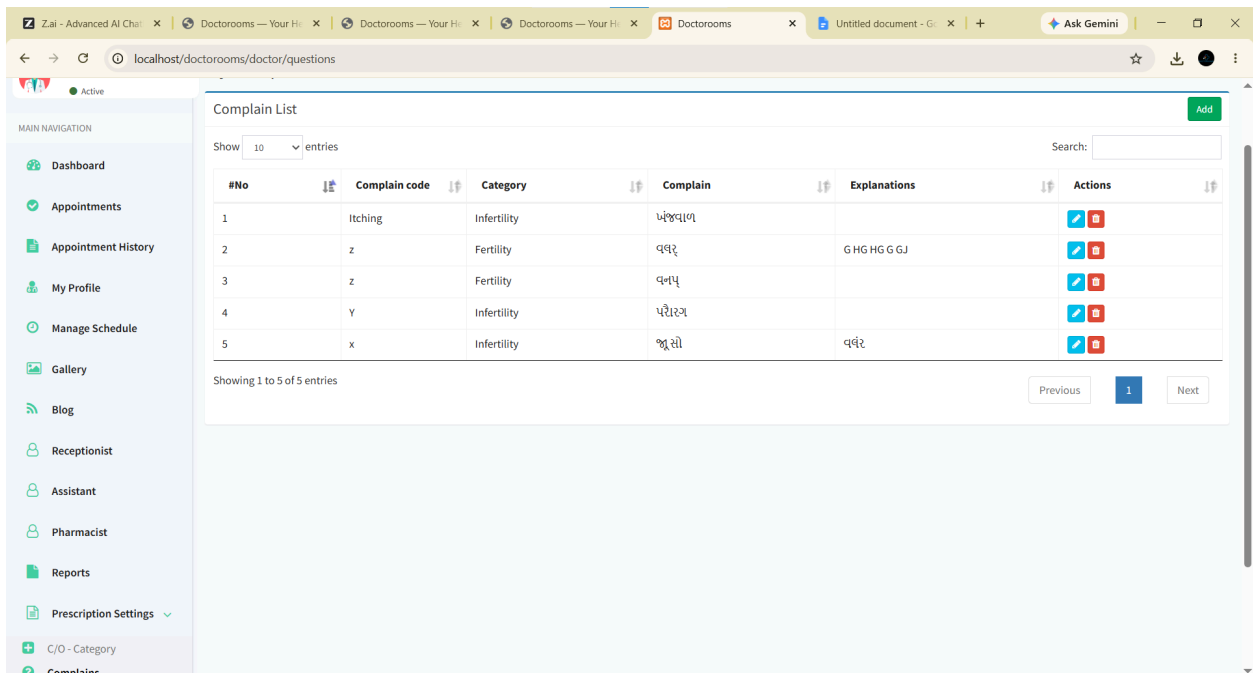

Yha se hm sara manually entry krte hai pricription setting banaya hai usme

1. % compalins ka you can anlyse the image , fist step me hm % ki categories add krte hai detailes ke sath bit dashboard pe sirf category hi show hogi

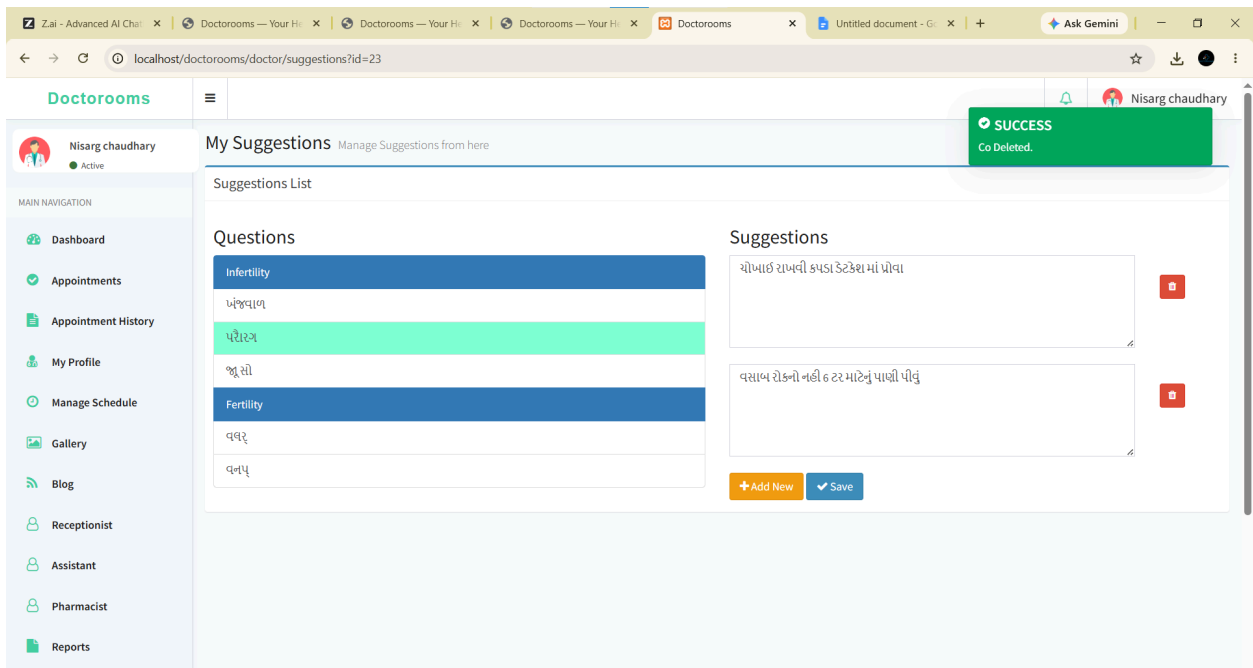

[2.ab](#) hmadd krte hai complains catagies ko select karke jese ki ex. Fertilyty cetegory hai to usme complains aa sakti hai jese “ ulti thavi, loose motion, headache etc.” to hm cetegory vise

complain add krte hai complain code ke saath

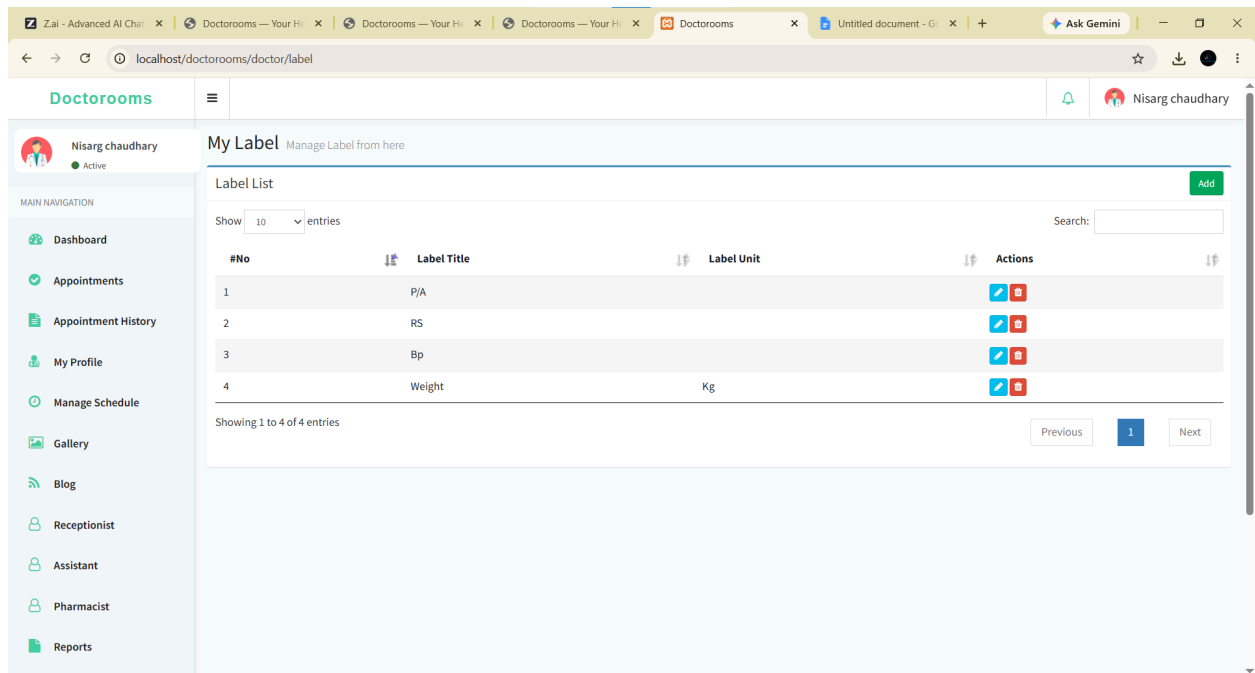

3.ab hr colain hoga to uske different different solutions bhi hote hai to yha pe hm solution add krte hai categy vise complain show hoti hai and complain ko select karke multi le suggestion add krte hai,

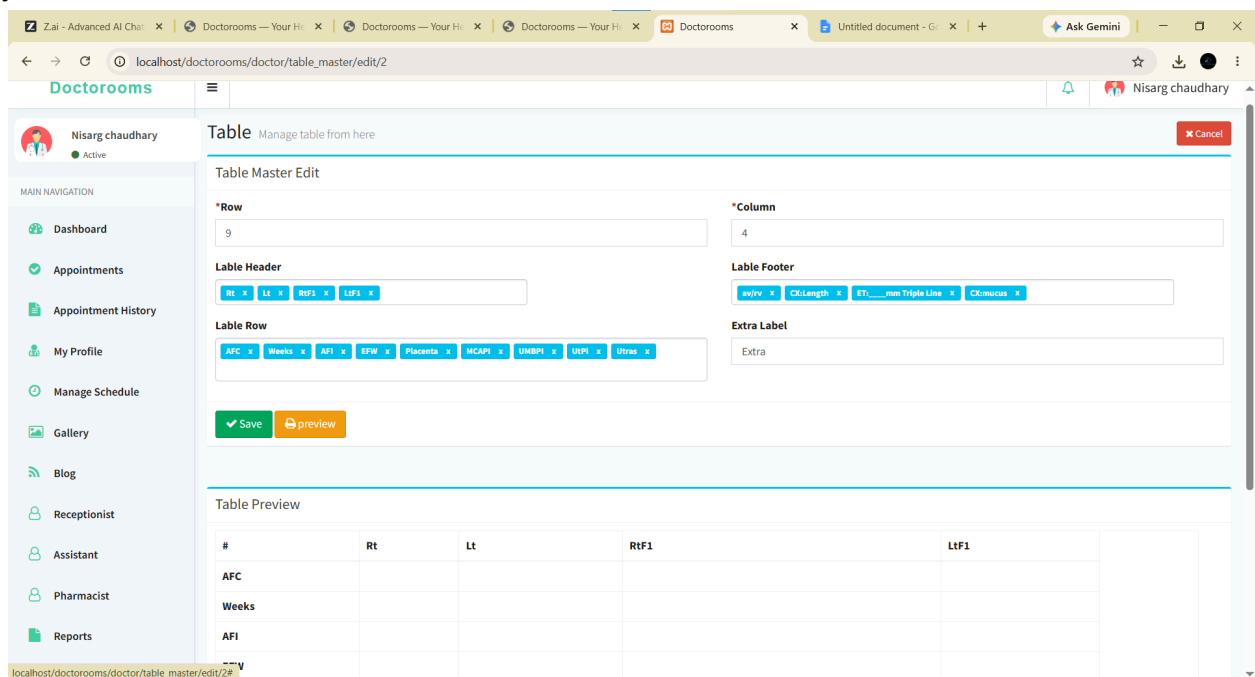

4.ab aa gye vitals add krte hai and uske saath me uska unit bhi to jb vital bhare to unit piñe note na karna pade jese ki weight hai to uske samne me setting me kg dal hi dega to ab jb hm system me type krenge pricription banate time 70 type kiya to prescription me 70 kg likhke

ayega weight ke samne

5. Table jo hm banate hai to vo sare doctors use nai krte hai koi koi doctor jisko table chahiye hota hai vo leta hai jisko table nai chahiye hota hai to vo use nai krta hai jese ki ye gynec doctor ka mene table dikha rha hu tume kis tareh se hm table add krte hai, and niche priview bhi aa jata hai6

6. Ab dekho hm other setting me dalte hai header ko agar kisi doctor ka full header bana hua

hai to file upload kr dega taki kya hoga ki full header pricription me aa hi jayega
